SEALANT COMPATIBILITY WITH HOT-MELT

Refer to this compatibility list when we used hot-melt as our secondary sealant (mainly in the residential sector). By doing so, you will ensure that sealants close to insulated glass units manufactured by Multiver are compatible with our sealants. Multiver uses high quality products during the assembly of insulated glass units. However, **the use of incompatible products** in contact with our sealants **significantly increases the risk that insulated units will become unsealed** and we cannot guarantee our insulated units under such conditions.

The following is a list of products, most of which are compatible with our polyisobutylene (PIB) primary sealant and our Hot Melt secondary sealant. Sealants have been tested by independent laboratories in accordance with the standards set by the **American Society for Testing and Materials (ASTM)**. Sealants labelled as compatible can come into contact with our sealants, either directly or indirectly, without affecting our primary or secondary sealants.
